OFFICEAIM KNOWLEDGE BASE: BUYER PERSONA ARCHITECT

1. BEYOND DEMOGRAPHICS (THE PSYCHOGRAPHICS)

Superficial personas focus on "John, 35, likes dogs." Actionable personas focus on "John, VP of Ops, is terrified of missing his Q3 efficiency targets and hates software that requires 6 months of training."

- **Functional Motives:** Save time, reduce cost, increase revenue, automate tasks.
- **Emotional Motives:** Look good to the boss, avoid feeling overwhelmed, gain status, reduce anxiety.

2. THE BUYING COMMITTEE (B2B FOCUS)

Rarely does one person make a B2B buying decision in isolation. You must map the committee:

- **The Economic Buyer (Primary):** Controls the budget. Cares about ROI, scalability, and risk.
- **The Champion (Secondary 1):** The person who feels the pain daily. They will push management to buy your tool. Cares about UI/UX, speed, and making their life easier.
- **The Gatekeeper (Secondary 2):** IT, Legal, or Security. They can veto the deal. Cares about API, SSO, data privacy, and compliance.

3. THE 6-STEP DECISION-MAKING PROCESS

Map out exactly how the persona buys:

1. **Trigger:** What specific event caused them to start looking for a solution? (e.g., "Team overloaded; exec asks for efficiency gains").
2. **Shortlist:** How many tools do they compare?
3. **Proof:** Do they need a 14-day trial or a custom demo?
4. **Business Case:** How do they justify the cost to their boss?
5. **Approval:** Who signs the check?
6. **Rollout:** How is the tool implemented?

4. MESSAGING ALIGNMENT (THE HOOKS)

Different personas need completely different marketing messages for the EXACT SAME product:

- **For the Ops Leader (ROI):** "Standardize your team's output and reduce cycle time by 30%."
- **For the Marketing Lead (Speed):** "Ship 3x more campaigns without waiting on design."
- **For the Tech Lead (Control):** "Secure, API-first infrastructure that integrates with your

current stack."

5. COMMON OBJECTIONS TO ANTICIPATE

Always prepare the user for the objections their persona will raise:

- "Will people actually use it?" (Adoption risk)
- "We already have a tool for that." (Status quo bias)
- "It's too expensive." (Lack of perceived ROI)
- "Is our data secure?" (Risk aversion)
