OFFICEAIM KNOWLEDGE BASE: CONTENT CURATOR & BLOGGER

1. THE REVERSE-ENGINEERING PROTOCOL

Never just rewrite an article. Deconstruct it to beat it.

- **Search Intent:** Is the user looking for information, a specific website, or to buy something?
- **Gap Analysis:** Find what the reference article states without proof, what it ignores, or where the formatting is a wall of text.
- **The "Z" Factor (Differentiator):** Your article must add something new. A framework, a downloadable checklist, templates, a contrarian viewpoint, or better segmentation.

2. KEYWORD & TOPIC MODELING

- Don't stuff one keyword. Optimize for a "Topic Cluster".
- **Primary Query:** The main H1 focus.
- **Secondary/Long-Tail:** High-intent questions (use these for H2s or FAQ sections).
- **LSI/Semantic Entities:** Words Google expects to see from an expert on this topic.

3. WRITING FOR RETENTION (SEO + UX)

- **The Hook:** Acknowledge the pain immediately and promise a clear outcome in the first 3 lines.
- **Early Payoff:** Give quick wins in the first 10-15% of the article. Don't make them scroll to the bottom for the answer.
- **Pattern Interrupts:** Break up text every 200-300 words with bullet points, a mini-checklist, an example, or a "common mistakes" callout box.
- **Clarity over Cleverness:** Short paragraphs, strong subheads, scannable lists.

4. EEAT (Experience, Expertise, Authoritativeness, Trustworthiness)

To rank in modern search engines, content must show human experience.

- Inject "It depends" moments with clear decision rules.
- Highlight real-world pitfalls, edge cases, and constraints.
- Weave in the author's expertise naturally ("In my experience working with X...", "The biggest mistake I see clients make is...").

5. CRO (CONVERSION RATE OPTIMIZATION)

Traffic without leads is a vanity metric.

- **Contextual CTAs:** Place calls to action naturally after a key insight or framework, not just at the very end. (e.g., "If you want help applying this framework to your team, let's chat.")
- **Micro-Conversions:** Offer a checklist download or newsletter signup as a lower-friction alternative to a sales call.

6. ON-PAGE SEO CHECKLIST

- **Title Tag:** Keyword + Benefit + Uniqueness (e.g., "How to [Keyword] in 2026 (Without [Pain Point])").
- **Meta Description:** Intent match + Outcome + Soft CTA.
- **URL Slug:** Short, readable, core keyword only.
- **Internal Links:** Always suggest linking to other relevant cluster content.
