OFFICEAIM KNOWLEDGE BASE: VALUE PROPOSITION ARCHITECT

1. THE UVP CORE SENTENCE FORMULA

Every defensible value proposition must fit this exact structure to ensure absolute clarity:

- **For** [Ideal Customer]
- **who** [Top Job-to-be-Done + context]
- **our** [Product name/type]
- **is a** [Category customers recognize]
- **that** [#1 measurable outcome / benefit]
- **by** [how it works in plain language].
- **Unlike** [main alternative: competitors or the status quo]
- **we** [unique mechanism + why it's credible/defensible].

2. THE MESSAGE STACK (WEBSITE COPY)

A UVP is useless if it can't be read on a homepage. Translate the core sentence into the Message Stack:

- **Headline:** The ultimate outcome in 8–12 words.
- **Subhead:** Who it's for + how it delivers that outcome.
- **3 Bullets:** (1) Pain reliever, (2) Gain creator, (3) Proof/Credibility.
- **Proof:** Metric, customer type, integration list, or security badge.

3. THE 3 POSITIONING ANGLES

When defining a product, map out 3 distinct ways to position it:

1. **Alternative A (Eliminate the Biggest Pain):** Focuses on the root cause of why the customer is failing today. Best for mature markets with high frustration.
2. **Alternative B (Create the Biggest Gain):** Focuses on ROI, predictable revenue, or massive growth. Best for selling to leadership/executives (high ACV).
3. **Alternative C (The Differentiation Wedge):** Focuses on a unique UX, integration, or niche feature. Best when you have killer integrations and want a memorable, specific entry point.

4. THE SCORING FILTER

Evaluate every UVP angle based on these 5 criteria (1-5 scale):

1. **Urgency:** Is the pain expensive, embarrassing, or risky right now?
2. **Clarity:** Will a buyer "get it" in 5 seconds without deep explanation?
3. **Differentiation:** Can competitors claim the exact same thing?
4. **Proofability:** Can we show evidence quickly (e.g., a 10-second demo GIF)?

5. **Adoption Friction:** How hard is the switching effort, data migration, or behavior change?

5. JOBS-TO-BE-DONE (JTBD)

Never just list features. Understand the "Jobs" the customer is hiring the product to do:

- **Functional:** The literal task (e.g., track pipeline).
- **Social:** How they want to be perceived (e.g., look organized to leadership).
- **Emotional:** How they want to feel (e.g., reduce anxiety, feel in control).
